

NEO JARMAWIJAYA

SOFTWARE ENGINEER

Tangerang, Indonesia | +6282126569920 | neojarmawijaya@gmail.com | github.com/neojarma

SUMMARY

Backend Developer with experience building high-reliability fintech services, including Payment Gateways, QRIS, and E-Wallet systems. Proven ability to deliver scalable microservices, improve performance through backend optimization, and ship critical features under tight timelines. Leverages AI-assisted development tools to accelerate delivery, enhance accuracy, and maintain high code quality in cloud-based distributed systems.

SKILLS

- **Programming Languages:** Golang, Java, JavaScript, Python, PHP
- **Frameworks/Libraries:** Echo, Fiber, Express, Flask, .NET
- **Databases & Caching:** MySQL, PostgreSQL, MS SQL Server, MongoDB, Firebase, Redis
- **Cloud & Infrastructure:** AWS, Alibaba Cloud, Google Cloud
- **Messaging & Streaming:** RabbitMQ, NATS
- **Architecture:** Microservices Architecture, Event-Driven Systems
- **Observability & Monitoring:** ELK Stack, APM tools, Jaeger
- **Tools & Practices:** Git, Docker, Unit Testing, REST API Development
- **Web Technologies:** HTML, CSS

EXPERIENCE

PT BAYARIND ARTHA INTERNUSA

Back End Developer (September 2024 – present)

- Developed QRIS ecosystem features (MPM, CPM, QRIS Tap) with multi-switcher integration (Rintis, Alto, Artajasa), ensuring high reliability and compliance.
- Migrated legacy e-wallet core from Java to Golang, significantly improving performance, code maintainability, and security standards.
- Integrated with KYC provider partners to support user verification processes and ensure compliance with regulatory requirements.
- Engineered and maintained core payment gateway modules (Virtual Account, Disbursement, Card Payments, Biller), supporting high-volume financial transactions.
- Applied clean architecture and microservices design to enhance scalability and system resilience.
- Strengthened code quality through unit testing and structured development practices.
- Collaborated and communicated effectively with cross-functional teams including QA, Product, Business, and external partners to ensure smooth integration and delivery.
- Took ownership of features end-to-end, proactively identifying improvements, aligning with product objectives, and driving implementation from design to production.
- Designed and implemented authentication and security mechanisms using JWT, hashing, and symmetric/asymmetric encryption to safeguard sensitive data and ensure secure financial transactions.
- Optimized backend performance by improving query efficiency, caching strategies, and service communication, resulting in faster response times and improved system throughput.
- Implemented robust error handling, retry mechanisms, and transaction safety measures to ensure system reliability and consistency.

PT. SUMBER TRIJAYA LESTARI

Back End Developer Intern (August 2023 – December 2023)

- Engineered new features and functionalities using Golang, enhancing the overall performance and user experience of the applications.
- Diagnosed and rectified software defects, ensuring system stability and reliability.
- Crafted efficient database queries to interact seamlessly with both MongoDB and PostgreSQL databases.
- Executed code migration and refactoring from legacy repositories, significantly improving codebase quality and maintainability.
- Produced clean, maintainable, and well-documented code, adhering to best practices and coding standards.

EDUCATION

STMIK AMIKBANDUNG

Bachelor of Computer Science - GPA 3.75/4.00
